

# EmergencyKT: Diagnosis of Ectopic Pregnancy in Hemodynamically Stable Woman

1. Clinically stable females with any or all: (1) abdominal/pelvic pain, (2) adnexal mass, (3) vaginal bleeding, (4) syncope, (5) dizziness  
 2. **Definitive IUP**: Gestational sac with yolk sac/fetal pole  
 3. **Definitive EP**: Gestational sac containing clearly defined yolk sac or fetal pole outside of endometrial cavity (including cornua)  
**Suggestive EP**: (1) Thick-walled adnexal mass separate from ovary with anechoic center and no yolk sac/fetal pole, (2) Solid or complex mass (solid and cystic) identified separate from ovary, (3) moderate or large amount of anechoic fluid or any echogenic fluid in cul-de-sac.  
**High risk indeterminate sonogram findings**: βhCG >1000 without structure resembling gestational sac.

4. **High risk features**: Previous chlamydial infection, previous tubal ligation, previous ectopic pregnancy, age>40, concerning abdominal exam, technically inadequate ultrasound  
 5. There have been extremely rare reports of pregnancy with βhCG < 5 mIU/ml  
 6. Patient with a history of assisted reproductive fertility (including *in vitro* fertilization or ovulation induction agents)
