

EmergencyKT: Post RSI Management

EmergencyKT: Post RSI Management

For Non-TBI Post Intubation Management
Choose **One** Regimen:

Propofol + Fentanyl
Or
Lorazepam + Fentanyl
Or
Midazolam Intermittent Dosing + Fentanyl

PROPOFOL

Initiate weight based **Propofol** infusion:
- Start infusion at 5mcg/kg/min
- Increase infusion by 5-10 mcg/kg/min q 5 min. to achieve subjectively adequate sedation per MD or RN
- Do not exceed 80 mcg/kg/min
- Continuous BP cycling q 2 minutes
- Reduce Propofol infusion by ½ if SBP<90 or MAP<60

LORAZEPAM

Initiate **Lorazepam** gtt: 0.5 – 2.0 mg / hr IV

MIDAZOLAM

Intermittent Midazolam 1 mg – 5mg IVP q 60 min

Hold if SBP < 100

For pain control, administer continuous fentanyl infusion: 25-100 mcg/hr
(Document reason such as patient size, multiple injuries, etc., if administering >100 mcg/hr.)
